WORK EXPERIENCES

PHIA AI Fashion Tech Company — New York, NY

Senior Data Scientist — *Sep. 2025 - Present*

Phia Growth Analytics & Data Science: Experimentation, KPI Infrastructure, and Revenue Optimization

- Built and deployed "Phia Data," a Claude-powered Slack analytics agent serving 20+ users, reducing weekly ad hoc data requests handled by the data team by ~75% (30 to 6–8 requests) through automated Q&A and nightly evaluations.
- Owned product and growth analytics as Phia scaled from 300K to 2M users, leveraging behavioral segmentation, cohort analysis, and funnel optimization to identify retention, conversion, and revenue opportunities.
- Led 20+ A/B experiments across product features and user experiences, defining hypotheses, success metrics, and statistical analyses to guide product decisions.
- Developed an LLM-powered user profiling pipeline leveraging shopping behavior and engagement signals to personalize home-feed recommendations, contributing to ~20% MAU growth.
- Built 30+ production dashboards and standardized cross-platform KPIs, enabling self-service analytics and executive decision-making on revenue forecasts, marketing budgets, and $35M Series A fundraising.
- Automated data pipelines with Airflow, reducing processing time by ~30% and BigQuery costs by ~45% through canonical data modeling.

SOCIÉTÉ GÉNÉRALE Global Banking & Financial Services — New York, NY

Data Science Capstone Consultant — *Sep. 2025 - Dec. 2025*

Anti-Money Laundering Anomaly Detection & Transaction Risk Scoring

- Built an unsupervised AML anomaly detection system using 861K real international wire transactions from Société Générale to identify suspicious behavioral patterns beyond traditional rule-based monitoring.
- Engineered 240 AML-focused features from 46 raw variables, capturing transaction patterns including burst activity, repeated sender-beneficiary relationships, multi-intermediary routing, and high-risk cross-border activity.
- Benchmarked HBOS, PCA, Isolation Forest, and ECOD and developed hybrid ensembles that detected all 32 benchmark suspicious transactions while uncovering complementary money-laundering patterns across models.
- Presented a phased adoption roadmap to Société Générale stakeholders and implemented percentile-based risk tiers (top 10% High / top 5% Critical) in a Streamlit investigator dashboard, enabling risk-based transaction triage designed to reduce unnecessary KYC escalations.

MIDAS INFORMATION TECHNOLOGY Construction IT Software Company — Seoul, Korea

Data Analyst – Global Sales & Marketing — *Apr. 2022 - Jun. 2024*

Customer Analytics & CRM Optimization: Driving Market Expansion with SQL, Python, and BI

- Leveraged SQL, Python, and BI tools to analyze customer and market data, helping expand MIDAS Structural Engineering Software to 80+ universities across the U.S., UK, and Canada, exceeding adoption targets by 200%.
- Standardized HubSpot CRM and built 15+ Power BI dashboards to analyze lead, web traffic, and customer journey metrics, contributing to a 30% increase in free trial registrations.
- Analyzed university content demand and student career needs using Python, informing the launch of an educational platform featuring 30+ tutorial videos and career resources.

EDUCATION

COLUMBIA UNIVERSITY — New York, NY

Master of Science in Applied Analytics, GPA: 4.0/4.0 — *Sep. 2024 - Dec. 2025*

- **Activities:** Founding Board Member, Columbia University Consulting Club

BOSTON COLLEGE — Chestnut Hill, MA

Bachelor of Arts in Communication, Cum Laude — *May. 2021*

- **Military Service**: Republic of Korea Army (2017 - 2019)

TECHNICAL CAPABILITIES

- **Programming**: Python, R
- **Database**: MySQL, PostgreSQL, BigQuery, Snowflake
- **Data Processing:** PySpark, Hive
- **Version Control / CRM:** Git, GitHub, HubSpot, Salesforce
- **Business Intelligence (BI) Tools**: Power BI, Tableau, Looker
- **Cloud Platforms**: Azure, AWS, Datadog

PROJECT EXPERIENCES

Amazon Cart Abandonment Analysis Using Python, Clustering, and Logistic Regression — *Jan. 2026*

- Analyzed user behavior in Python to identify key drivers of cart abandonment, finding that frequent browsing was associated with lower drop-off rates, while “Save for Later” usage and poor product recommendations increased abandonment risk.
- Built a logistic regression model with 78.4% accuracy to identify high-risk user behaviors, revealing a 67% higher likelihood of abandonment among users with moderate satisfaction and low trust in recommendations.
- Applied K-means clustering and sentiment analysis to 600+ users to segment behavioral patterns and uncover key pain points related to pricing, packaging, and platform trust, informing UX and retention strategies.
